## Analysis Project

Travel Bird

In order to continue with the Certificate of Web Development and Design at the prestigious Southern Alberta Technology Institute ( SAIT). We need to create an analysis of the final project which in this case it's a functional web site of our choice

### 1. Introducing the proposed website.

We discussed to build a travel website that includes capital cities of our own countries: Taipei, Seoul, Quito. We will have same lay out for each webpage. Our color theme is blue and gray tone. Our homepage has a logo as a home button. There are three city photos can link to each different country page. Everyone build their own pages about travelling their city. Footer will be contact information.

### 2. List all goals achieved by the proposed website

Use list to build Navigation bar and float left

Make columns for content

Use images as links

Build a customer form

Write a table with some information

Image background

Use img tag to display food photos

Link to different webpages

Iframe videos, audios, a google map

3. List all features/functions you are planning to implement and include in the website.

Logo is a home button

City photos are links and display circle

Contact form has a animation. To catch it will show secret page.

Language options

Use airplane image for cursor

Give border style of table

Food photos are able to magnify

4. Visitor Interaction: what will visitors be able to do on this website? List all the activities they will complete while visiting.

Visitor can watch videos to know more travel information

Choose different language for website

website links to help booking flights and hotels

Search information in the website

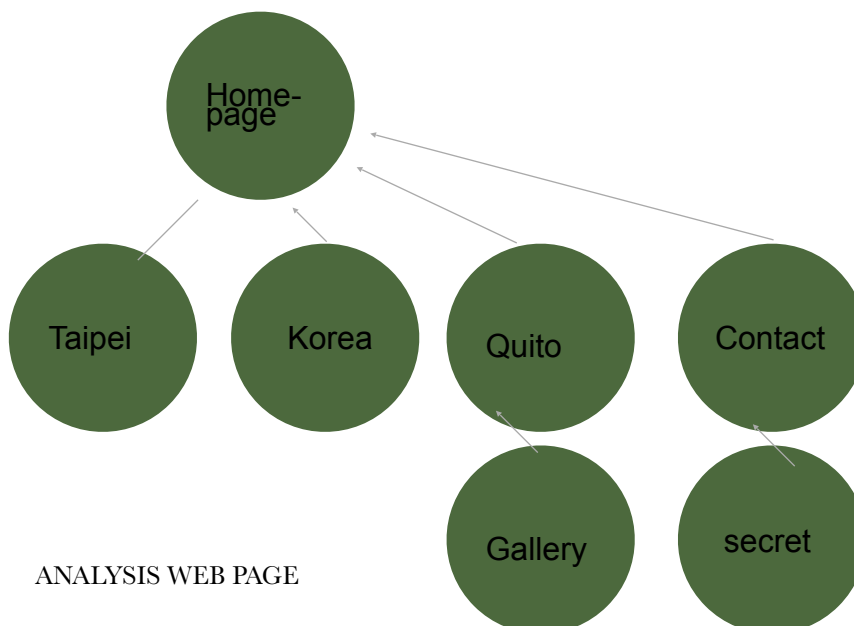

Read the information and check the traditional food

Map guide show visitors how to get the destination

Any questions are welcome to contact us

5. Sitemap and Navigation:

What is the structure of the website?

How many pages will be included in the website and which pages will be linked?

At least five pages

Homepage will be linked as a home button. Taipei, Seoul, Quito pages will be linked from city photos. Also Contact form page will be linked

List the sections and content categories of each webpage.

Homepage  
menu  
three columns for each city link

Taipei page  
Video  
Culture  
Weather  
Food photos  
Transit

Korea page  
Video  
Culture  
Weather  
Food list

Quito page  
Video  
Culture  
Weather  
Food photos

Contact form  
form

6. Styling and Design: what is the look, feel and brand of the website? Identify the broad styling and design considerations.

Blue and gray will be our color tone. We named the website TravelBird, such as a bird travels in blue sky.

Transparency is a great way of making [text more readable when placed above images](#). Doing so also preserves the part of the image below the text so that the full image can still be seen to some degree.

7. Assumptions: list any assumptions made about the proposed website.

We need language options to work, but it's a part of Javascript and php  
We need responsive design for other devices
